PROFESSIONAL SUMMARY

Results-driven Technology Analyst with 5 years of experience encompassing both core backend development and production support engineering for global industry leaders. Adept at managing the full application lifecycle, from engineering complex Java-Spring pricing engines to diagnosing critical runtime issues and maintaining underlying infrastructure. Deep expertise in Linux environments, Docker containerization, CI/CD pipelines, and SQL database management. Proven track record of delivering robust APIs, providing tier-3 technical support, and mentoring junior engineers.

CORE COMPETENCIES

- **Languages & Frameworks:** Java 17, Spring Boot, Microservices, JavaScript (AngularJS)
- **Infrastructure & OS:** Linux (Advanced System Administration & Troubleshooting), Docker, Jenkins, Git, Jira
- **Cloud & Databases:** Amazon SQS, PostgreSQL, Microsoft SQL Server
- **Spoken Languages:** English (Professional), Bengali (Native), Hindi (Professional)

PROFESSIONAL EXPERIENCE

Technology Analyst (Client: CMA CGM) - Infosys

October 2025 - June 2026

- Engineered a complex dynamic pricing engine and a robust quote management and processing platform utilizing Java 17.
- Acted as primary Tier-3 Support Engineer, diagnosing application bottlenecks and managing real-time data layer processing via PostgreSQL.
- Integrated Amazon SQS to manage asynchronous message queuing and transaction processing.
- Managed deployments and application reliability across enterprise Linux servers using Docker and automated pipelines.
- Led the development of multiple core product features while providing technical support, troubleshooting guidance, and knowledge transfer to 4 junior mentees.

Senior System Engineer (Client: CMA CGM) - Infosys

January 2023 - October 2025

- Functioned as a hybrid Developer and Support Engineer to maintain high availability for logistics application modules.
- Wrote extensive business logic using Java 17 to efficiently manage crates and goods within shipping containers.
- Managed, queried, and optimized the PostgreSQL data layer to handle logistical and shipping records.
- Implemented, configured, and maintained containerized Linux environments and deployment pipelines to support reliable feature delivery.

System Engineer (Client: Tiffany & Co.) - Infosys

June 2021 - December 2022

- Wrote robust backend APIs in Java to support marketing and creative asset management systems. Queried and maintained the database layer built on Microsoft SQL Server.

- Provided application support by diagnosing and squashing frontend bugs in JavaScript (AngularJS) to ensure cross-stack application stability.
- Handled basic environment configuration and log analysis within Linux-based development environments.

iOS Developer Intern - Appsbee *December 2019 - January 2020*

- Created a media OTT streaming platform with a built-in user authentication system.

PERSONAL PROJECTS

nontoosick.fun | *Java Spring, PostgreSQL, Docker*

- Created, designed and developed a high-traffic web application (https://nontoosick.fun/) currently attracting 100+ unique daily users.
- Architected the backend using Java Spring and PostgreSQL, implementing effective data caching to optimize application performance.
- Engineered extensive security hardening, including robust rate limiters and session token management, to ensure system integrity for a by-design, account-less architecture.
- Containerized the application and managed seamless deployment via Docker.

EDUCATION

Kalinga Institute of Industrial Technology, Bhubaneswar *2017 - 2021*

Bachelor of Technology (B.Tech) in Electrical Engineering

CERTIFICATIONS

- Core Java Certification
- iOS App Developer Certification
